Heuristic Evaluation Workbook

WonderPets — Veterinary Appointment System

MAY 2026

Course	HCI2 — Human-Computer Interaction
Institution	Partido State University
Group	Group 1
Project Title	WonderPets — Veterinary Appointment System
Evaluators	Rica Rose R. Vipinoso, Francis Jerome D. Arayon, Ellen R. De la Cruz, John Kendric P. Pahoyo
Date of Evaluation	May 2, 2026
Framework Used	Jakob Nielsen's 10 Usability Heuristics (Nielsen Norman Group)

Nielsen Norman Group

Heuristic Evaluation Workbook

MAY 2026 · WonderPets

Evaluator Name:	Rica Rose R. Vipinoso
Role:	BSIT 3E — Team Leader
Project Title:	WonderPets
Date of Evaluation:	May 2, 2026

Heuristic	Description & Checklist	Issue/s Identified	Recommendations
H1 Visibility of System Status	The design should always keep users informed about what is going on, through appropriate feedback within a reasonable amount of time. • Does the design clearly communicate its state? • Is feedback presented quickly after user actions?	N/A	N/A
H2 Match Between System and Real World	The system should speak the users' language, with words, phrases and concepts familiar to the user, rather than system-oriented terms. • Will users be familiar with the terminology used? • Do the controls follow real-world conventions?	N/A	N/A
H3 User Control and Freedom	Users often choose system functions by mistake and will need a clearly marked exit to leave the unwanted state without extended dialogue. Support undo and redo. • Does the design allow users to go back a step? • Are exit links easily discoverable? • Can users easily cancel an action? • Is Undo and Redo supported?	Limited visible cancel or back options during appointment scheduling.	Provide clear back, cancel, and edit buttons during every booking step.
H4 Consistency and	Users should not have to wonder whether different words,	Some buttons and layouts vary slightly between	Maintain consistent button colors, spacing,

Heuristic	Description & Checklist	Issue/s Identified	Recommendations
Standards	situations, or actions mean the same thing. • Does the design follow industry conventions? • Are visual treatments used consistently throughout?	pages.	typography, and navigation across all modules.
H5 Error Prevention	A good design prevents problems from occurring in the first place. Eliminate error-prone conditions or present confirmation before users commit to an action. • Does the design prevent slips using helpful constraints? • Does it warn users before they perform risky actions?	Required fields are not clearly marked, so users may accidentally leave important information blank.	Add asterisks (*) for required fields and show real-time validation messages before submission.
H6 Recognition Rather Than Recall	Minimize the user's memory load by making objects, actions, and options visible. • Does the design keep important information visible? • Does the design offer help in-context?	Users may need to remember previous appointment details while navigating forms.	Display appointment summaries and labels clearly throughout the process.
H7 Flexibility and Efficiency of Use	The system should support both new and experienced users by providing shortcuts and allowing personalization of frequent actions. • Does the design provide accelerators like keyboard shortcuts? • Is content personalized or customized for individual users?	N/A	N/A
H8 Aesthetic and Minimalist Design	Dialogues should not contain irrelevant or rarely needed information. Every extra unit competes with relevant information. • Is the visual design focused on the essentials? • Have all distracting, unnecessary elements been removed?	N/A	N/A
H9 Help Users Recognize,	Error messages should be in plain language, precisely indicate the problem, and constructively	Error handling and recovery messages are not clearly visible.	Use clear error messages with suggestions on how users can fix problems

Heuristic	Description & Checklist	Issue/s Identified	Recommendations
Diagnose, and Recover from Errors	suggest a solution. • Does the design use traditional error message visuals (bold, red text)? • Does it offer a solution that solves the error immediately?		immediately.
H10 Help and Documentation	If help is needed, it should be easy to search, task-focused, and provide simple step-by-step guidance. • Is help documentation easy to search? • Is help provided in context right when the user needs it?	No visible help center, FAQ, or user guide was shown in the system.	Add FAQs, tooltips, and user documentation for easier navigation and support.

Heuristic	Description & Checklist	Issue/s Identified	Recommendations
H1 Visibility of System Status	The design should always keep users informed about what is going on, through appropriate feedback within a reasonable amount of time. • Does the design clearly communicate its state? • Is feedback presented quickly after user actions?	N/A	N/A
H2 Match Between System and Real World	The system should speak the users' language, with words, phrases and concepts familiar to the user, rather than system-oriented terms. • Will users be familiar with the terminology used? • Do the controls follow real-world conventions?	N/A	N/A
H3 User Control and Freedom	Users often choose system functions by mistake and will need a clearly marked exit to leave the unwanted state without extended dialogue. Support undo and redo. • Does the design allow users to go back a step? • Are exit links easily discoverable? • Can users easily cancel an action? • Is Undo and Redo supported?	Cancel buttons are limited and are not highlighted well enough.	Provide clear and visible back, cancel, or exit buttons for better user experience.
H4 Consistency and	Users should not have to wonder whether different words, situations,	Some button sizes and elements on the layout,	Maintain consistency such as implementing fixed

Heuristic	Description & Checklist	Issue/s Identified	Recommendations
Standards	or actions mean the same thing. • Does the design follow industry conventions? • Are visual treatments used consistently throughout?	and colors vary throughout the design.	sizes on each button, color consistency, and layout design.
H5 Error Prevention	A good design prevents problems from occurring in the first place. Eliminate error-prone conditions or present confirmation before users commit to an action. • Does the design prevent slips using helpful constraints? • Does it warn users before they perform risky actions?	Some fields are not marked required.	Add an asterisk (*) symbol as an indicator that each form field is required to be filled.
H6 Recognition Rather Than Recall	Minimize the user's memory load by making objects, actions, and options visible. • Does the design keep important information visible? • Does the design offer help in-context?	N/A	N/A
H7 Flexibility and Efficiency of Use	The system should support both new and experienced users by providing shortcuts and allowing personalization of frequent actions. • Does the design provide accelerators like keyboard shortcuts? • Is content personalized or customized for individual users?	N/A	N/A
H8 Aesthetic and Minimalist Design	Dialogues should not contain irrelevant or rarely needed information. Every extra unit competes with relevant information. • Is the visual design focused on the essentials? • Have all distracting, unnecessary elements been removed?	N/A	N/A
H9 Help Users Recognize, Diagnose, and	Error messages should be in plain language, precisely indicate the problem, and constructively suggest a solution.	Error handling and message are not visible.	Provide clear error messages.

Heuristic	Description & Checklist	Issue/s Identified	Recommendations
Recover from Errors	• Does the design use traditional error message visuals (bold, red text)? • Does it offer a solution that solves the error immediately?		
H10 Help and Documentation	If help is needed, it should be easy to search, task-focused, and provide simple step-by-step guidance. • Is help documentation easy to search? • Is help provided in context right when the user needs it?	No help or FAQ button to help users understand and navigate the system properly.	Add FAQs and a tutorial setting for users to help them with their inquiries and navigate properly.

Nielsen Norman Group

Heuristic Evaluation Workbook

MAY 2026 · WonderPets

Evaluator Name:	Ellen R. De la Cruz
Role:	Member
Project Title:	WonderPets
Date of Evaluation:	May 2, 2026

Heuristic	Description & Checklist	Issue/s Identified	Recommendations
H1 Visibility of System Status	The design should always keep users informed about ongoing activities by giving proper feedback within an appropriate amount of time. • Does the design clearly show its current status? • Is feedback given immediately after the user performs an action?	N/A	N/A
H2 Match Between System and Real World	The system should use words and terms that users can easily understand instead of technical terms. Information should be presented clearly based on real-life situations. • Will the user understand the terms used in the design? • Are the design controls based on familiar real-world conventions?	N/A	N/A
H3 User Control and Freedom	Users can make mistakes when using system functions, so the design should provide an easy way to go back or exit. It should also allow undo and redo actions. • Does the design allow users to return to the previous step? • Are the exit links easy for users to find? • Can users easily cancel an action? • Is Undo and Redo supported?	Cancel, back, and edit buttons are not easily visible during appointment scheduling.	Make sure back, cancel, and edit buttons are clearly visible during each booking step.

Heuristic	Description & Checklist	Issue/s Identified	Recommendations
H4 Consistency and Standards	Users should not be confused about whether different terms, situations, or actions have the same meaning. • Does the design follow industry conventions? • Are visual treatments used consistently throughout the design?	Some buttons and layouts vary slightly between pages.	Maintain consistent button colors, spacing, typography, and navigation across all modules.
H5 Error Prevention	A good design should prevent problems from happening instead of only showing error messages. It should provide confirmation before users continue with an action. • Does the design prevent slips by using helpful constraints? • Does the design warn users before they perform risky actions?	Required fields are not clearly marked, so users may accidentally leave important information blank.	Add asterisks (*) for required fields and show real-time validation messages before submission.
H6 Recognition Rather Than Recall	Reduce the need for users to remember information by making actions, options, and features visible. Instructions should be easy to see or access whenever needed. • Does the design keep important information visible? • Does the design offer help in-context?	Users may need to remember previous appointment details while navigating forms.	Display appointment summaries and labels clearly throughout the process.
H7 Flexibility and Efficiency of Use	The system should support both new and experienced users by providing shortcuts and allowing them to personalize common actions for faster use. • Does the design provide accelerators like keyboard shortcuts and touch gestures? • Is content personalized or customized for individual users?	N/A	N/A
H8 Aesthetic and Minimalist Design	A dialogue should avoid irrelevant or rarely needed information because it can distract users and make important details harder to notice. • Is the visual design and content focused on the essentials?	N/A	N/A

Heuristic	Description & Checklist	Issue/s Identified	Recommendations
	• Have all distracting, unnecessary elements been removed?		
H9 Help Users Recognize, Diagnose, and Recover from Errors	Error messages should be written in simple language, without codes, clearly explain the problem, and suggest a helpful solution. • Does the design use traditional error message visuals (bold, red text)? • Does the design offer a solution that solves the error immediately?	Error handling and recovery messages are not clearly visible.	Use clear error messages with suggestions on how users can fix problems immediately.
H10 Help and Documentation	A system should ideally work without instructions, but if help is needed, it should be easy to search, task-focused, and give simple step-by-step guidance. • Is help documentation easy to search? • Is help provided in context right when the user needs it?	No visible help center, FAQ, or user guide was shown in the system.	Add FAQs, tooltips, and user documentation for easier navigation and support.

H10 Help and Documentation	If help is needed, it should be easy to search, task-focused, and provide simple step-by-step guidance. • Is help documentation easy to search? • Is help provided in context right when the user needs it?	There was no user manual, FAQ, or help center displayed in the system.	For simpler navigation and assistance, include user manuals, tooltips, and FAQs.

Consolidated Summary of Findings

WonderPets · Group 1 · May 2026

The following table consolidates all usability issues and recommendations identified by the four evaluators across Nielsen's 10 Usability Heuristics. Issues marked N/A by all evaluators are not included.

Heuristic	Issue Identified	Recommendation	Identified By
H3 — User Control and Freedom	Cancel, back, and edit buttons are not clearly visible or emphasized during the appointment scheduling flow.	Make back, cancel, and edit buttons clearly visible during each booking step.	All 4
H4 — Consistency and Standards	Button sizes, colors, spacing, and layout elements vary inconsistently between pages.	Maintain consistent button colors, spacing, typography, and navigation across all modules.	All 4
H5 — Error Prevention	Required fields in the appointment form are not marked, and there is no real-time validation to prevent incomplete submissions.	Add asterisks (*) for required fields and show real-time validation messages before submission.	All 4
H6 — Recognition Rather Than Recall	Users may need to remember previous appointment details while navigating different form pages.	Display appointment summaries and labels clearly throughout the booking process.	Vipinoso, De la Cruz
H9 — Help Users Recognize & Recover from Errors	Error messages are not visible or descriptive enough for users to understand what went wrong or how to recover.	Use clear error messages with suggestions on how users can fix problems immediately.	All 4
H10 — Help and Documentation	No help center, FAQ section, tooltips, or user guide is available to assist first-time users.	Add FAQs, tooltips, and user documentation for easier navigation and support.	All 4

Heuristics with NO issues identified (N/A by all evaluators):

H1 — Visibility of System Status | H2 — Match Between System and Real World | H7 — Flexibility and Efficiency of Use | H8 — Aesthetic and Minimalist Design
